Tape-in Hair Extension care instructions

1. Do not wash hair for three days after application. Washing your hair before the glue has time to set, may cause extensions to fall out.
2. Do not wash hair in hot water for seven days after the application. Use only tepid or cold water for the first week.
3. Do not stand under the shower head when washing hair. The beating of the water penetrates the tape and may cause extensions to fall out.
4. Do not brush hair extensions when wet.
5. Always hold top of extension when brushing hair.
6. Do not apply conditioners or oils directly on the tape. Only condition the tips of hair extensions.
7. You may style as desired with any curling iron, flat iron, or other heating device. NOTE: Frequent or prolonged use of high heat devices may cause split ends to develop. Deep conditioning treatments recommended for the use on tips of extensions when high heat styling is being frequently performed.
